I love BX Console SSL SSL Very true and clean sound! Fanthastic! Fanthastic! BX 4000G console of all proven emulations, the BX 4000G console is the best. I had the opportunity to use a real 4000g SSL console for some time, and the sound is very similar. The interface is very intuitive and beautiful, slightly different from the original bank. In addition to its competitors, the G BX console does not weigh much on the CPU, which allows it to keep open numerous instances of the same complement. In a nutshell, a fantastic complement that improves each sound and each mixture. As always, Brainworx and Plugin Alliance are the best in terms of quality and reliability. Felicitations also for the help of Plugin Alliance, among the professionals and more unrealized. No matter how problem they have, they solve it immediately! GRAMO! Congratulations 4000e my preference for the SSL 4000 g slabs it in synthesizers, strings, voices Rhodes/pianos and other keyboard elements. I let the SSL 4000 and handle the battery/percussion and the bass, these strips are complemented between sã ... I must confess, I have not used my snow strip in a time and perhaps because these two strips add sand and present for the Hip songs of wallet. You will have to find a task for the Neve N Strip because it seems 4000 g & i erok about all tasks! In my next session I will use them all! (SNOW N/SSL4000E/G) These brainworx emulations is the plug! SSL 4000 G I has almost all SSL emulations available, and this is my new favorite. For me, this is an update of the next generation on the other channels available in the market, thanks to TMT, which imparts a subtle warmth and depth that it is difficult to achieve otherwise, and I had eluded even when you use the emulation of consoles From other partners, however, a star retained due to the complicated nature of the user interface. that the knobs are difficult to use ... are very delicate and is easy to addjust. LAWMapeing the controls to a midi controller that gives me more control by marking the equalization changes. Another positive ... If you mixture rock, the ssl g eq is increased. It seems to me that you can score in the average range in a more than cãrido way that with the E series, which is excellent for the guitar and the low heavy. After using emulations of the E series during the last 8 years, the eq g is a welcome game ... It moves with a kniting fae. In summary, if the user interface were a little less delicate, it would have been a review of 5 start. Thank you for the great Brainworx complement! Wow, I have been doing and mixing music for approximately 13 years and I cannot believe that he is now learning about Plugin Alliance. I obtain this emulation with the pick pack agreement. It sounds increase. I hope you had these things before. It makes a big difference when you know what you are doing. I have been looking forward to it since I tried ... first, I want to thank Plugin Alliance for doing its own and making this happen, this bringing increasing accessories. I am eternally grateful. People say that accessories do not make clues, and that is true ... but sometimes it needs a particular complement, because their entire track building is based on a particular sound. Without this complement, the track cannot be translated from the mind to the Daw. This is where Bx_Console SSL 4000 g enters. Since probing it and heard what I could do, I did this really strong trial track with an 808 kick and some congas. In general, I do not like strong clues and prefer a huge dynamic range, but this track required an extreme volume without sounding too compressed. It was possible with this complement. All my other accessories and even my hardware killed the blow of the kick 808 more than a certain level, making it compressed and soft. My L3 plugin can't pull it off.Thanks to Brainworx for making this AMAZING plugin. I will use it all the time. This is the type of plugin you go back to, instead of having it cluttering the plugin list in your DAW. God bless you guys! Peace! SSL Console 4000 G TMT? such an amazing feature!Last year I bought the Console N which I totally enjoyed working with. My latest works in Live, Cubase and ProTools sound much better now.I used to work on a real 48 track SSL console for a couple of months and missed the sound of it. Now I grabbed the occasion to add the bx_console SSL G to my bx_console N and entered a new level!I appreciate DirkÂ´Às tips in the manual :) Thanks! Finally I get a shout-out for the tips in the manual!
